## Mighty Pump's Present at Falling Walls Lab International Research Competition!

After being awarded first place in the Alberta competition, Mighty Pumps has been invited to present at the Falling Walls Lab competition as the representative for Alberta in Berlin! Falling Walls Lab competition offers scientist, entrepreneurs, and innovators a stage to pitch the research ideas to their peers and a distinguished jury of academics and business leaders. Our CEO Jeremy Leonard is going to make the trip to Berlin to show off the technology for our Automatic Mighty Dredge!

Our Automatic Mighty Dredge has been created to be the most cost effective and most efficient dredge on the market. The patented Mighty Dredge is an underwater robot that works in similar to a Roomba vacuum cleaner – it moves autonomously, operated solely by a computer.

The technology allows our dredge to work 24/7 for weeks at a time without taking a break. It can work longer and with a much smaller footprint than conventional equipment. It can work in hazardous environments and in extreme conditions, where people should not even go. The Mighty Dredge knows what it is pumping so it can move more material and less water than a conventional dredge.

For more information on our full product lines see our website [www.MightyPumps.com](http://www.MightyPumps.com)
