Reduce Your Carbon Footprint by Using Mighty Pumps!!!

Mighty Pumps DT18
85% efficient at BEP

Godwin CD500M
64% efficient at BEP

- According to the US Energy Information Administration, (EIA), burning a gallon of Diesel Fuel produces 22.38 pounds of Carbon Dioxide (CO₂). (A gallon of gasoline produces 19.64 pounds of CO₂).
- Our Mighty Diesel Pumps burn 20% less fuel for each gallon of water pumped compared to many of our competitors pumps.
- On one site right now, where Canada Pump and Power (CPP) operates 60 Mighty Pumps which have been running 24/7 for the last three years, the Mighty Pump Efficiency has reduced the Carbon Dioxide Output by more than three million (3,000,000) pounds of Carbon Dioxide – more than one million (1,000,000) pounds a year!
- But it gets better than that! Because we use GPS and Telematics, these 60 pumps are now managed by roving crews that drive a total of three (3) vehicles. In the past there would be thirty (30) vehicles to do the same work to monitor these pumps. Since even an idling truck burns about one gallon of diesel per hour, this reduction in vehicles has reduced our Client's output by more than another Seven Hundred Thousand (700,000) Pounds of Carbon Dioxide over the last three years!
- And creating all that CO₂ used to cost our Client a lot more money than they spend now, with Canada Pump and Power and our Mighty Pumps!
