Certified Fittings

In order to adhere to B31.3 (Process piping) standards, Canada Pump & Power has been building steel fittings at our Redwater Facility. Materials are verified prior to starting fabrication that the MTR's are matching the component heat numbers. Each fitting is being welded by a certified welder to meet ABSA standards. To verify these standards are being met we are x-raying a portion of the welds and hydrostatically testing all of the finished spools. Once these fittings are fabricated and pass testing they are being stamped with a B to show they comply with the B31.3 standards and an X if they were x-rayed.

If you need to purchase headers, bends, spools or other fittings manufactured to the B31.3 standards please email us a Sales@MightyPumps.com for a quote.
