Automatic Mighty Dredge in Action!

Our Internationally Patented and Acclaimed Mighty Dredge successfully completed its first Dredging Job in November 2016 at a Mine Site in Alberta!

Thousands of yards of material were excavated and the entire pond area was dredged without any Dredge Operators – the entire pond was cleaned by our computer!

- Our Mighty Dredge is a digging underwater robot, directed solely by a computer.
- It knows where it is, what it is doing, and plans what to do next, without asking for help.
- It also knows what it is pumping – it speeds up, slows down, digs harder, or backs off - to optimize the feed rate and maximize production - automatically.
- Mighty Dredge can move more material with less water than a conventional dredge because it is always digging, with no recovery cycle.
- It can work in poisonous environments, in extreme weather conditions, and at great depths. Mighty Dredge works where people cannot go.
- Mighty Dredge is scalable. Our technology works with a four-inch dredge or a forty-eight-inch dredge. It pumps sludge, sand, gravel, minerals, and garbage.
- There are no people required to operate the Mighty Dredge. It can work 24/7 for weeks at a time without taking a break.
