Industrial Dredging Services

Canada Pump and Power owns and operates Dredging Equipment. This includes Conventional Dredges, Excavator Mounted Dredge Pumps, a Floating Backhoe, and a Skyline Excavator System.

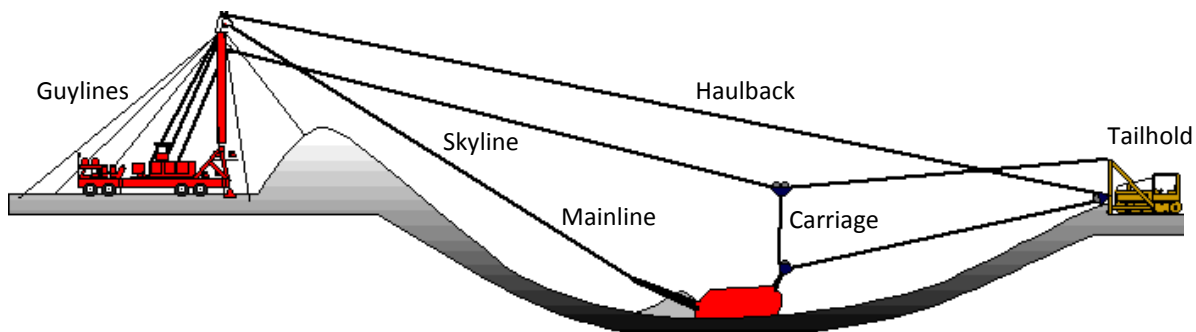

Our Skyline System is comprised of a portable tower (see picture on the left) that drags a bucket from an anchor point to the excavator. This process allows a range of 1,200 feet, so we can dig out a pond without having to put personnel or equipment on the ground.

Our floating excavator is a conventional backhoe with Wilson Marsh Equipment floating undercarriage. This makes our excavator fully amphibious (see picture on right). Wilson has been building these units for two generations, and this company builds the safest units on the market.

To support these specialized pieces of equipment we also own Barge Units, Conventional Draglines, Backhoes, Loaders, and Dozers.

Above: Illustration of how the Skyline System works.

Call us at your convenience at 1-877-898-3494 or email us at sales@albertapumps.com.
