Taking a Deep Dive to Provide you a Solution

Is your project being impacted by something under the water and your not sure exactly what it is or how to fix it?

In many underwater inspections it is difficult to identify and even see what is happening! This is why Canada Pump and Power (CPP) utilizes the latest underwater imagery and inspection tools which helps pinpoint exactly what is going on, even when there is zero visibility.

Once the underwater problem is properly identified, our team of specialists develops the best and easiest solution.

This past month, one such solution led to CPP deploying our team of divers to safely and efficiently clean a wet well which had been building up sediment for over 10 years.

CPP's team was up for the challenge! "We provided a 5-man dive team along with a hydraulic submersible diver dredging system which digs up and removes sediment from the wet well. Removing the built up sediment restores the wet well back to the original design which allows the wet well pumps to return to normal operation" Said Ryan Witteman, CPP Diving Operation Manager.

CPP's expert dive team has almost completed the sump cleaning and is on schedule for their next underwater project.

Have a similar situation? CPP has a team of certified professional divers who are ready to perform your next underwater inspection, maintenance, repair or service.

Canada Pump and Power is committed to being the best and easiest solution for all industrial marine services and products. Please give us a call at 1-780-922-1178 or email CPP at sales@canadapumpandpower.com for any industrial marine products or service solutions!
