CPP Provides Marine Support for ROV Operations!

For the past several months, Canada Pump and Power (CPP) has provided a 12 meter x 10 meter modular barge platform, gantry, dynamic anchor system, and industrial boats to launch and recover two working class remotely operated underwater vehicles (ROV's) at the St. Mary Dam. This equipment has been utilized to change out a leaking valve at the end of a 100 meter long horizontal shaft. The entrance to the shaft is 50 meters below the surface, covered by a large steel grating that needed to be cut off and replaced after the repair. While all this work was going on remotely, the underwater visibility for our cameras on the ROV's was less than two inches!

Canada Pump and Power employs a team of experienced and certified Marine Operators who hold Captain's licenses, SVOP, Med A-3, Commercial Diving Certifications, Confined Space Entry tickets, and a host of trade and work related certifications.

If you have a unique industrial marine problem that needs to be solved, we have a team of engineers and skilled operators who are experienced in planning and executing a safe and efficient solution!

Canada Pump and Power is committed to being the best and easiest solution for all industrial marine services and products. Please give us a call at 1-780-922-1178 or email CPP at sales@canadapumpandpower.com for any industrial marine products or service solutions!
